

True 2-0-8 Liquid fertilizer

True 2-0-8 is a liquid fertilizer formulated to supply plants with readily available potassium, while adding carbon and beneficial bacteria into the soil. Due to its mineral ionic K⁺ form, it is a highly available form of K that is quickly available during crucial reproductive and growth stages. Potassium, along with other nutrients can bind to other compounds in the soil. True 2-0-8 will help mobilize those nutrients, making them plant available.

Ingredients.

- **Sulfate of Potash:** Natural potash mineral, chlorine free, low in salts
- **Fish:** Biostimulant, introduces beneficial microbes into the soil, enhances activity of native soil microbes
- **Molasses:** Fuel source for beneficial microbes in the soil

Benefits.

- Mineral ionic K⁺ form which is quickly available
- Increases response to nitrogen
- Available potassium can improve yield
- Biostimulant for plant microbes in the soil
- Rich in available carbon
- Promotes soil and plant health
- Improves tolerance to environmental stress, especially drought stress

Application rates.

- **Low Deficiency:** 7-14 gallons/acre
- **High Deficiency:** 14-20 gallons/acre
- **Soil test is recommended for proper application rate**

True 2-0-8 has 0 days to harvest restrictions. This product is rigorously tested to be free of human pathogens; manufactured in the only ISO 22000 certified fertilizer plant in the world, which means each lot is heat treated in a food safety management system which exceeds the requirements in the FDA

Directions of use.

True 2-0-8 can be applied through most irrigation systems including drip, sprinkler, micro-sprinkler, and flood. Applications can be made by banding the product along the seed-line or transplant line.
